African Programme for the Control of Epizootics (PACE)

Documentation Mission Report:
Document Management Component

Draft Report

Rosemary N. Chacha

November 2006

gtz International Services

SATEC DÉVELOPPEMENT INTERNATIONAL

Summary

The Pan-African Programme for the Control of Epizootics (PACE) has accumulated a large number of documents over the seven years the project. The documentation mission resulted from the recognition of a need for project's archiving and document management and recommended a proper documentation and archiving of the project outputs.

Stakeholder comments suggested the need for comprehensive archiving of project documents under one roof in addition to strengthening the AU-IBAR library collection to meet the information needs of the Institution. The library lacked current information resources and had a manual catalogue. An in-depth analysis of the current filing system revealed an elaborate system that was not strictly complied with leading to misfiling and difficulties in accessing documents. A new database allowing searching of documents using various criteria and hosted on an intranet was proposed. The intranet will host a virtual library from which project documents can be downloaded. The key PACE Documents were gathered and digitised where necessary in readiness for the creation of the virtual library. Over 150 documents were indexed as a first step to the creation of the database.

The challenges faced included the departure of the team leader and the delay in contracting the consultant who was to create the database software.

Recommendations

- That the AU-IBAR library be transformed into a one-stop shop documentation centre for all projects past and current
- The filing system created for PACE be extended for use in all AU-IBAR projects and member countries be incorporated in its implementation
- That filing of docs in server/database be undertaken by one person to preserve integrity and security of documents, and to ensure uniformity and consistency
- All documents filed be labelled comprehensibly and logically for easy access
- Another mission be formulated to facilitate the database creation and the indexing of mission reports – this mission should be linked to the Bamako mission if possible

1. Introduction

The PACE programme is a major development programme in the field of animal health in Africa aimed at building upon the headway made in the campaign against Rinderpest in order to establish affordable national and continental epidemiological surveillance networks for the main animal diseases. It is also aimed at providing the countries with the capacities needed to organize economically and technically justified control programmes and develop effective and sustainable distribution of veterinary products and services.

The overall objective of the programme is to relieve the poverty of those involved in the livestock-farming sector (producers, service providers and consumers) in Africa by improving animal productivity, trade and food security.

The PACE programme covers 32 sub-Saharan Africa countries. The Programme is coordinated by the Inter-African Bureau for Animal Resources (IBAR) of the African Union (AU). The organizational chart of the programme includes a programme Coordination Unit (PCU), based in Nairobi. National operations are planned and implemented in each country through National Project Coordinations, supported by two Regional Coordination Units based in Nairobi for Eastern Africa and Bamako for West and Central Africa.

The projects implemented in each country are technically backed-up by Common Service Units (CSU) housed in IBAR, Nairobi, and Technical Assistants recruited through a service contract stipulated in 2002 with the consortium GTZ/IS - SATEC.

Over its seven years of existence, PACE has generated a large number of documents at the Program Coordination Units (PCU) level and at member country level. The documentation mission comes at the end of PACE its genesis being the final evaluation of PACE which critiqued the project's archiving and document management and recommended a proper documentation and archiving of the project outputs.

The main purpose of the PACE documentation mission was to design and prepare a comprehensive documentation on the implementation, management and achievements of PACE and to consolidate and organise all documentation and information currently available at both PACE Coordination Units. The expected product will constitute the memory of the seven-year implementation of the programme.

The documentalist's component of the mission involves proposing on an appropriate filing system and reinforcement of AU-IBAR capacity for management of collection documentation and storage including a functioning means of information sharing. The ToR of the documentation component are as follows:

- Propose appropriate system of filing the PACE documentation and improvement methods in the light of the existing documents prepared by the PCU, the EU, the common services and the national coordinations

- Specific proposals should be made regarding the functionality of the current system
- Conceive the design of the storage of documents and material in particular the organisational, managerial and administrative, financial aspects with the technical expert and make recommendations how the overall design of the documentation of the programme can be streamlined in the future.
- Make realistic proposal for the reinforcement of AU-IBAR capacity at regional and national level as well as institutional strengthening under the current management and organizational structure for the collection, documentation and storage of PACE material
- Propose a functioning and sustainable information means and technologies at country, regional and Pan-African level

The specific activities to be undertaken include:

1. Briefing with PACE, AU/IBAR and ECD
2. Discussion with stakeholders
3. Analysis of filing system
4. Proposal of new filing system and recommendations for the future
5. Gathering and analysis of documents
6. Filing of existing documents
7. Submission of draft mission report

The methodology adopted in addressing the ToR, includes collating of the views of stakeholders on the current filing system and general information management. In addition, the existing filing system is analysed as a basis for proposing a new filing system. A new filing system is designed in consultation with PACE staff and applied in the indexing of about 150 key PACE documents. An inventory of the documents is made and documents not available in soft copies digitised.

Dr. Abdulaye Niang, who left on health grounds, initially led the mission. The other two consultants took a two-week break between September 15 and October 2, 2006 as a replacement for the team leader was sought. The mission was completed without a team leader and as a result, the Bamako part of it was postponed

2. Activities undertaken

2.1 Briefing sessions

The mission commenced on August 28, 2006 with briefing sessions with key AU-IBAR-PACE personnel including the Director of AU-IBAR, Dr. Modibo Traore, Mr. Otto Moller of EU, Dr. Andrea Massarelli and Dr. Ahmed Alsawalhy. Dr. Massarelli, the mission coordinator at that time explained the main task of the documentalist was ensuring that a soft copy and hard copy existed for key PACE documents and filing of these documents. The term filing was used interchangeably with the creation of a database.

The Director requested the documentalist to review the IBAR library with a view to making it an archive for all the Institute's documents. He also requested that the consultant explores the possibility of the establishment of cooperation between the AU-IBAR library and ILRI library for the purposes of information sharing.

2.2 Discussions with stakeholders

Discussions were held with PACE unit heads, administrative staff and the Documentalist. They centred on seeking views about the current filing system and general information management. The comments on documentation revolve around the organisation of documents, the library content and services and cooperation with ILRI.

a. **Organisation of documents:** The filing structure of the documents in the server was difficult to follow and the need for members of staff to buy into it for greater compliance was felt. Furthermore there was a lot of information stored in CDs that was not in use. There were gaps in the records, as some staff did not submit mission reports. Material in the library was not well organised and thus hard to retrieve. Important documents such as technical reports for closed projects had not been stored back in the library since the relocation of AU-IBAR offices. One of the reasons given for this is that the relocation was not professionally conducted leading to document mix up and slow reorganisation. Communication in the PACE project relied extensively on email and there was need for an effective email archiving system.

b. **Content:** The library should stock documents related to animal health as well as relevant grey literature and other resources both in electronic and print format. The Institution should acquire all key information on livestock including theses published in different universities all over the world. It should essentially be a clearing-house of such information in Africa. Some of the documents and information at the PCU should be disseminated to PACE countries.

c. **Cooperation with ILRI:** Cooperating with the ILRI library might not adequately serve the information needs of AU-IBAR as the two institutions had clear separate mandates. ILRI's mandate is mainly hardcore research in Africa and Asia while IBAR has a clear development mandate. ILRI might not have much of the required grey literature such as conference papers and project reports. Cooperation with ILRI might also be constrained by the limited collection the AU-IBAR library had to offer.

d. **The AU-IBAR Library Services:** The AU-IBAR library has a sizeable collection of journals and other publications but these are outdated and there is only one current journal subscription. The library does not host current project documentation, as project documents are deposited in the library when the projects are over. The current material is largely composed of gifts from various institutions. Members of staff rarely make order requests and the library budget is limited. The library has a manual catalogue and offers no current awareness service. While the library has large reading area reading furniture such as tables and chairs were lacking.

2.3 Analysis of existing filing system

An in-depth examination of the current filing system brought about four main observations. First, there is in place an elaborate filing system for both hard and soft copies. It has a comprehensive coverage of the documents of the programme. The system is however too

elaborate and detailed and requires a deep understanding to follow and utilize. The consultant has proposed a simpler system with fewer clusters elaborated in the next section.

The second observation is that despite the elaborate system, the actual filing was incomplete and sometimes mixed up. While the filing of hard copies is well done and administration staff are satisfied with it, the same can not be said of the electronic copies. Often documents relating to an activity such as a conference, i.e. invitation letters, programmes and even papers presented will be filed in the appropriate folder, but the conference report will be missing. Poor labelling of folders and files also made documents difficult to locate.

Thirdly, the actual filing in the server is subdivided into two main categorisations. One is chronological, while the other topical. The chronological system though very comprehensive is only helpful to the person filing. Retrieving documents from this category requires the date of filing – not just the date of the event and/or correspondence. In addition there is duplication of effort as some are documents filed under both sequences. In some cases key documents have been partially filed in the subject sequence while the complete filing has been done in the chronological sequence. A classic example of this was found with mission reports where only 2000 and 2001 reports were available from the mission reports folder in the subject sequence, while the comprehensive collection was found in the chronological sequence. Retrieval of electronic copies of mission reports was hence particularly difficult. On the whole, document retrieval is not easy retrieve and is next to impossible for outsiders to access.

Another hurdle with the electronic filing system requires direct searching and filing in the AU-IBAR server. This is not an advisable way of filing as it can easily compromise the security and integrity of institutional data and information. Searching without an interface can also be very laborious.

2.4 The Proposed Filing System

In addressing the need for better organised filing system and easier retrieval of documents, the consultant has proposed an electronic filing system involving the creation of a database to be accessed on an institutional intranet. The end product will be a virtual library of PACE documents.

Initial consideration for the use using of a free software – Weblis – from UNESCO was ruled out in favour of a tailor made solution. The latter was considered more suitable for the largely unconventional nature of documents to be indexed. The decision was arrived at in consultation with the head of Publications Unit, Dr. Baba Soumare and Mr. Dario Beraldi a consultant in database management.

The consultant has designed the search criteria to be used in document retrieval. The proposed design was discussed and agreed upon with PACE staff (Dr. Massarelli, Dr. Soumare, Ms. Ogutu, Mr. Beraldi). The search criteria allows a wide range of searching options including the more conventional access points such as author, title and key words, in addition to more PACE specific access points such as geographical region and document format. The selection of the document formats part of the search criteria is based on a truncated version of the current filing system. A data entry sheet that allows for database creation using various entries corresponding

with the search criteria was also designed. Both the search criteria and data entry sheet appear in Annex A.

The software to be used to run the intranet will be designed by Mr. Beraldi. This software is similar to that designed for the *Institut du Sahel* website. Mr. Beraldi presented a proposal to this effect to (Dr. Massarelli, Dr. Soumare, Mr. Saeleart, Ms. Ogutu and Ms. Aduke). The proposal was accepted subject to the effecting of a formal contract for the work. This presentation is annexed in this report. A sample of the search page has been sent to Dr. Soumare for review.

One of the key features of the virtual library is the links to electronic copies for download. This is particularly important in disseminating key information to PACE countries. Furthermore, although the search criteria has specifically been designed for PACE documentation, the database will have the necessary flexibility to accommodate all manner of documents and can be used to host the AU-IBAR library catalogue.

2.5 Gathering of Documents

The gathering process involved, an inventory of key PACE documents (listed in Annex B) available in hard and soft copy versions. While the hard copies were largely made available by PACE staff, the consultant searched for the soft formats from the AU-IBAR server. The documents that were not available in soft format were scanned as PDF files, while those not available in hard copies were printed. A total of 95 documents were digitised through scanning and over 60 were printed and bound.

The documents were gathered according to the list in Annex B although a longer list (Annex C) detailing items in categories such as Global Plans and Work Plans etc was prepared. Key documents such as annual reports that were missing from the list were added on to it. This exercise was important in availing hard copy documents for indexing, soft copy documents for uploading on the intranet and as an input designing the search page. This was a lengthy process that continued right up to the end of the mission as new documents kept surfacing from different sources.

2.6 Document Indexing

The consultant indexed the key PACE documents using the above-mentioned worksheet. A total of about 152 documents were indexed. At the time of indexing, Mr. Dario had not been formally contracted to create the intranet software. As a result, the indexing records were entered on worksheets in MS Word format. These records form the core from which the database will be created. A simple classification system using document categorization and titles was created for the purposes of the physical filing. The hard copy documents were filed in pamphlet boxes using this classification.

Indexing of all documents listed in Annexes B and C was completed with the exception of the mission reports. Due to the sheer numbers of mission reports (916 in total) and due to the poor filing system mentioned earlier it was not possible to index the reports within the mission days. The consultant proposes a separate mission for the purpose of indexing the mission reports. The

indexing of the PACE documents formed a core of the mission and took about 50 percent of mission time. Annex D provides a sample of different types of indexed records created.

3. Proposals on capacity reinforcement and sustainable means of information

The first three ToR formed the core of the documentation part of the mission and are addressed in section 2 above. According to Dr. Bessin, the fourth ToR falls under the Data and Communication Unit docket, while the Fifth was handled on a separate mission. This section therefore presents brief recommendations regarding the reinforcement of AU-IBAR capacity and a functioning and sustainable information means in addressing the fourth and fifth ToR.

- Due to the large number of documents handled by PACE, the PCU should have a documentation officer specifically assigned the duties of sourcing, trailing, and ensuring proper and timely filing of hard and soft copies of important documents.
- At country level, PACE offices should assign the responsibilities of ensuring all relevant documents are forwarded in soft and hard copies to the PCU to a specific officers. Such officers should work closely to the proposed documentation officer at the PCU to ensure the archiving activities are effective and well coordinated
- Policies regarding timelines for submission, forwarding of documents, and filing should be formulated and enforced. Regular reviews of the functionality of the filing system should be undertaken
- PACE Country offices should have computers and email and internet facilities
- Each office should have a website providing key content for salient issues in animal health and intranet containing key project documents. The country intranets should be interfaced with the PACE web site/intranet to enhance coordination between the PCU and the country offices and information sharing among PACE countries
- For countries lacking the necessary technology, soft copies should be sent to the PCU for uploading onto the AU-IBAR intranet

4. Challenges encountered

The following constraints posed challenges in effectively undertaking the mission

a. A considerable amount of time was spent in clearly comprehending the terms of reference, which impacted on the commencement of the respective tasks.
b. The document gathering exercise also took a considerable amount of time, especially because of the weak filing server system.
c. The Bamako part of the mission, a key component of the initial ToR, could not be fulfilled due to the illness and departure of the team leader and lack of a replacement.
d. The delay in contracting Mr. Dario meant that the software was not available during the mission period and the creation of the database had to be postponed.
e. Indexing of mission reports could not be undertaken within the mission days because the documents were too numerous and the soft versions difficult to retrieve.

5. Recommendations

The following recommendations are made to guarantee the completion of all the components of the documentation mission and to promote the sustainability of an integrated well functioning knowledge management system:

- That the AU-IBAR library be transformed into a one-stop shop documentation centre for all projects past and current and for livestock publications in Africa
- The filing system created for PACE be extended for use in all AU-IBAR projects and member countries be incorporated in its implementation
- That filing of docs in server/database be undertaken by one person to preserve integrity and security of documents, and to ensure uniformity, consistency and accountability
- All documents filed be labelled appropriately and logically for easy access
- Another mission be formulated to facilitate the database creation and the indexing of mission reports – this mission should be linked to the Bamako mission if possible

ANNEXES

Annex A: Categorization of search criteria

1. Free text search (searches all fields)
2. Document title
3. Document author (most of the docs will have a corporate author)
4. Project
5. Period – allows to search in a specific year or range of years
6. Key words – comprise subject headings by which docs can be accessed – will constructed with the help of AGROV Thesaurus (FAO)
7. Regions including: PACE countries, PACE regions in Africa, Geographical regions e.g. Rift Valley and Somalia ecosystem
8. Conferences/workshops Meetings, e.g. ACM,
9. Document formats/category e.g.
    a. Global plans (with drop-down menus for countries),
    b. Reports:
        i. Mission reports (with drop-down menus for PACE units),
        ii. Country reports (with drop-down menus for countries),
        iii. Annual reports
        iv. Annual coordination meetings
        v. EU monitoring reports
    c. Programme management:
        i. Financing agreement
        ii. MTR
        iii. FEM
        iv. MOUs
        v. Project proposals
        vi. Manual of procedures
        vii. Work plans and consolidated WPCE
        viii. Management meetings
        ix. Financial reports
    d. Publications:
        i. Research reports/papers
        ii. Newsletters
        iii. Posters
        iv. Brochures
        v. Press Kit
        vi. Press releases
    e. Audiovisual:
        i. Video clips
        ii. Audio clips

Data Entry Form/Sheet

Data entry fields

1.	Author (provide provision for repeated entry)
2.	Corporate author (provide provision for repeated entry)
3.	Title
4.	Parallel Title
5.	Serial title
6.	Language (to select English or French or both)
7.	Edition
8.	Volume No.
9.	Geographical region
10.	Place of publication
11.	Publisher
12.	Year of publication
13.	Project
14.	Project code
15.	Collation – no of pages, whether illustrated etc
16.	Conference/Workshop title
17.	Document format/category – see no. 9
18.	Document subcategory
19.	Media type Eg. monograph, CD, DVD, video, audio tape (provide provision to select)
20.	Supplementary information (eg document accompanied by CD-ROM)
21.	Notes eg conference sponsor
22.	Keywords/Topics
23.	Hyperlinks for soft copies, video clips, audio clips etc
24.	Abstract – where applicable
25.	Call number/file number
26.	Number of copies
27.	Date of Entry (should be automatically generated)

Annex B: Pace Documents List

1. PACE Financing Agreement
2. PACE Global Plans
3. Advisory Committee Meetings Reports
4. PACE Policy Committee reports
5. PACE Work Plans and consolidated WPCE
6. PACE final MTR Report
7. PACE Annual Coordination Meetings Reports
8. PACE Manual of Procedures
9. Back to Office Mission Reports
10. Management meeting reports
11. Financial reports
12. Various Interim Financial Reports on PACE
13. Memorandum of Understanding between RAO and NAO for Countries in PACE
14. Extension of PACE Regional and Country Programmes 2004-2006, PACE 2003
15. Progress Reports on Regional Technical TA, recruited under, GTZ Service Contract
16. Rider to the PACE Financing Agreement
17. Extension of PACE – PCU's Vision, Drs Bessin, Diop & Bourzat, Dec 03-Jan 04
18. Follow-up and consolidation of PACE Achievements' Concept Note Dr R. Bessin, B.A. Diop, A. Massarelli
19. Backstopping Mission to the Management of the PACE PCU, Draft Report, December 2001, J.E. Ternoy, External Consultant Consortium lead by AGRIFOR Consult of Belgium
20. EU Monitoring Reports on individual counties visited
21. Bulletins for the PACE Somalia Project
22. Various publicity materials produced by the Communications Unit
23. Pan African animal health yearbook, 2003
24. PACE – Somalia component: Terms of Reference for a Project Evaluation
25. PACE – Somalia component: Global Plan October 2000 to October 2000
26. Consultancy Reports
27. Annual Reports

Annex C: Extended PACE Documents List

Global Plans

1.	Fight against lineage 1 rinderpest virus project – Global Plan, June 2001
2.	PACE Tanzania Global Plan Document Aug 2001-Dec 2004
3.	PACE Mauritania: Program Global Plan 26/08/00
4.	PACE Republic of Guinea Plan Global February, 2000
5.	PACE Benin, October 2000 – September 2005
6.	PACE Equatorial Guinea
7.	PACE Guinea-Bissau Global Plan –Oct 2000
8.	PACE Ethiopia Global Plan, Dec 1999
9.	PACE Republic of Congo Global Plan, March 2001
10.	PACE Senegal Global Plan, November 1999
11.	PACE Togo Global Plan, June 2000
12.	PACE Burundi, Project PACE Burundi, 26/08/2002?, PACE Burundi, Global Plan
13.	PACE Chad, Dossier d'Instruction, August 2000
14.	PACE Gambia Global Plan, January 2001
15.	PACE Cote d'Ivoire May 2000
16.	PACE Mali March 2000 – Global Plan?
17.	PACE Ghana (Ghana National Project), 2000-2005, Oct 2000
18.	PACE Burkina Faso Nov 2000
